

Murrumbidgee HealthPathways is an online health system that provides evidence based assessment, management and referral information on specific common clinical conditions.

HealthPathways are developed locally through a collaborative process that brings GPs, specialists and key stakeholders together who work collaboratively to identify issues preventing optimum patient care in the particular clinical condition and to propose solutions to the issues identified.

Aims

- Promote best practice care through enhancing clinical knowledge by using evidence based clinical HealthPathways.
- Support consistent care and management of health conditions.
- Build a more sustainable and integrated health system for the Murrumbidgee area by assisting clinicians to connect patients to the right care, at the right time at the right place.
- Increase the number of patients that are managed in the primary and community care setting.
- Better quality and more accurate triage of referrals.

Benefits

- Developed by local GPs for use in general practice.
- Provides evidence based best practice guidelines, reference materials, local referral templates and patient resources for clinicians that is used at the point of care.
- Free, accessible dynamic platform with existing pathways reviewed regularly and new pathways being developed.
- Designed to be used at point of care primarily by general practitioners, but is available to hospital specialists, nurses and other health professionals.

HOW TO USE HealthPathways

1.

Email healthpathways@mphn.org.au to request log in details

2.

Go to: <https://murrumbidgee.healthpathwayscommunity.org>
